DETAILED ACTION

Election/Restrictions

Claims 1- 5 are pending in this application.

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-3, drawn to a semiconductor device, classified in class 257.

Group II. Claims 4-5, drawn to process of making a semiconductor device, classified in class 438.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of following can be shown: (1) that the process as claimed can be use to make other and materially different product or by hand, or (2) that process as claimed can be made by another and materially different process. (MPEP § 806.05(f)). In the instance case unpatentabilities of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by the processes materially different from those of the group II invention, for example, the electrode in group I invention can be formed without the processing steps as disclosed in group II invention: forming a sacrificial layer capable of being etched selectively without affecting the protective film, forming connecting holes reaching the input electrode and substrate, removing the sacrificial layer to create a

space part between the vibrator electrode and output electrode, and the band-shaped vibrator electrode in group I invention can be formed without the step of covering both end parts of the electrode inside connecting holes. Also, the device formed in group II invention includes the limitations that are not disclosed in the device of group I invention: the edge of each of the end parts of the electrode has a central part crossing over the output electrode, a connecting hole reaching the input electrode, a connecting hole reaching a surface of the substrate, a second conductive layer, a central part crossing over the output electrode etc...

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive. Therefore, separate examination would be required and restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
